

DYNAMIC MOTION

HAINZL
MOTION & DRIVES

WE PROVIDE MOVEMENT, CONNECTION AND EXPERTISE.

We are HAINZL Motion & Drives.

With our hydraulic, mechanical or electric drives, we move your machines and vehicles.

With our control technology, lubrication and filter technology, we are your system supplier. Above all, we move your work machines and off-highway vehicles in the construction industry, agricultural technology, forestry

technology, municipal technology, transport and logistics as well as emergency vehicles and special machinery.

During development, we accompany you from the initial idea, to the technical concept, the certification, commissioning and long-term maintenance.

TECHNOLOGICALLY APPEALING

HAINZL INDUSTRIESYSTEME

We have been successfully developing mechatronic, electronic and electrical products, machinery and systems since 1965. Customized. Dependable. Proven.

Today we are one of the leading system developers and implementers in Europe for customized technological solutions in system engineering and process automation, for motion & drives, for embedded systems, and in buildings technology and electrical engineering.

There is one key thing unifying us and our products:

We love technology for highest demands.

DRIVE ELEMENTS

Our drive elements connect the individual parts into a system. They transmit movement and regulate speeds.

ELECTROTECHNOLOGY

Our electrical drive trains power and provide everything you need for controlling, operating, measuring, and visualizing. The environmentally conscious components supply information from the system and initiate desired processes and movements.

INDUSTRIAL COMPONENTS

Our components in the field of control technology for stationary systems are mainly used in the heating industry.

HEAT EXCHANGERS

We provide the optimum cooling solution for your application.

SYSTEMS ENGINEERING

Our innovative and fast System, Safety, and Software Engineering (S³E) delivers robust electro-hydraulic and hybrid-electric systems for mobile machines and the entire off-highway market.

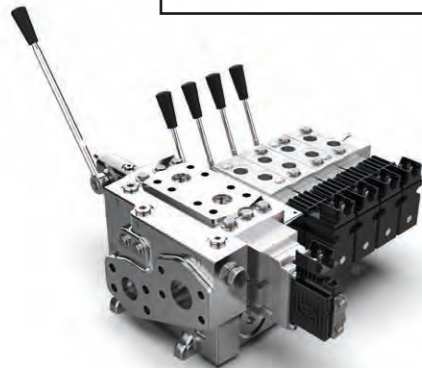

LUBRICATION

Our components and complete lubrication systems ensure friction-reduced long lifetime for your equipment. We support your systems with both engineering and professional installation.

HYDRAULICS

Our hydraulic components give your vehicles or machines powerful movements in any situation.

MOTION & DRIVES

We supply you with perfectly configured components from our leading international partners and develop intelligent functional modules up to fully integrated drive systems – all backed by our comprehensive engineering know-how.

SERVICE & MAINTENANCE

Certified maintenance and repair is much more sustainable than buying a new one and is also completed more quickly. With our second-life service for drive systems, you save time and money while also acting ecologically.

Top quality service, every time. For components from our partners as well as ALL established manufacturers.

24/7 accessibility guaranteed for every emergency. We know exactly what unplanned system downtime means for you. Sign up for our Anytime-Anywhere hotline.

Perfect performance documentation in house. We test your components at our state-of-the-art high-performance test stands. We will transfer the documentation to you together with any recommendations for action.
